

# Smart Marina

## Enhance Customer Experience

Nuvis Technologies is bringing cutting edge computer vision and artificial intelligence based technology to provide better customer experience while improving operations and reducing costs.

Smart Marina system automatically detects vacant slips in real time and keeps the management as well as the marina users always be informed.

The system provides data and advanced analytics for the management to better manage the marina.

Helps to improve safety and security as well as identify pollution in the water.

## About Us

Nuvis Technologies provides leading edge technology solutions based on Computer Vision, Artificial Intelligence, Block Chain, and IOT.

Our solutions include Smart Marina, Smart Park, Smart Ski, Smart Pool, Smart Space, Smart Traffic, and several Smart City application.

These are cloud solutions and eliminates the need for IT infrastructure and IT staff.

## System Features

Our system helps:

- Identify the available spaces and real time visual display of total un-occupied slips and their locations on the web and mobile app
- Tracks the number of boats in the marina
- Identify boats by reading the boat numbers and creating a real time database of boats in the marina and alerts if there is any unauthorized boat
- Improve safety and security by identifying fire and loitering around boats
- Identify any pollution and unwanted discharges from the boat in the water
- Extensive real time data and analysis of historical data to improve the management and optimization of the marina

Our computer vision based parking management system helps in managing the parking through License plate recognition to ensure only authorized vehicles are permitted to park (also parking fee collection, if applicable).
