Smart Ski

Enhance Customer Experience

Nuvis Technologies is introducing an innovative Smart Ski system based on computer vision and artificial intelligence technologies to help ski resorts provide wholesome customer experience while effectively managing operations – Lift waiting times, Slopes, Parking, Pools, Spaces, etc.

The system also helps predict the customer demand and revenues.

About Us

Nuvis Technologies provides leading edge technology solutions based on Computer Vision, Artificial Intelligence, Block Chain, and IOT.

Our solutions include Smart Ski, Smart Park, Smart Marina, Smart Pool, Smart Space, Smart Traffic, and several Smart City application.

These are cloud solutions and eliminates the need for IT infrastructure and IT staff.

System Features

Our system helps:

- Automatically count the number of people in lineups for lifts and display live waiting times
- Predict waiting time on any given day based on historical data and weather
- Count the number of skiers on slopes
- Display parking availability
- Display hot tubs usage
- Manage swimming pools
- Count the number of people and crowd flow in public spaces
- Display live weather information
- Extensive real time data and analysis of historical data to improve the management and optimization of Ski Resort. Including the prediction of business and revenue potential based on history and weather.

Customers and Management can access the data through their Smart Phone App, and Tablets

The system is modular and so customers can purchase only the features that will help them.
